

EXEGO™ REVIEW

Exego Review provides our clients with a superior review platform that is both powerful and effective. Our hosting team is available seven days a week to offer expert-level support and consultation. When combined with Exego Extract and Select, Exego offers a comprehensive end-to-end discovery solution.

SECURE END-USER PASSWORD RESETS

- Resetting a password is easily initiated directly from the login screen.
- Passwords are reset via a secure email hyperlink, leveraging the same technology used by online banking institutions.

DASHBOARD - REVIEW STATUS TRACKING

- Key project reports, charts and statistics are available directly from the dashboard and presented in real-time, which allows for immediate and efficient tracking of team and user-specific progress.
- The dashboard includes a chart of the percent of documents reviewed at the overall database-level and the individual reviewer-level.
- Additionally, the statistics pane on the dashboard displays key review statistics at the overall project, review set and batch level.

SEARCHING

- SQL-based searching capabilities.
- Full DT Search functionality, including proximity, stemming and fuzzy search options.
- Save search results as either static or dynamic.
- Easily add search results of other saved searches as search conditions.
- Search conditions are organized by category, making searching more efficient.

PROXIMITY TERM HIGHLIGHTING

- Proximity term highlighting allows for more precise highlighting, allowing focus on only the desired terms and the most relevant hits.

DYNAMIC CODING

- Dynamic field settings can easily be enabled from the front end, without any custom scripting. Once enabled, coding panes display only the relevant coding data for each record.

AUDIT FIELDS

- Audit fields are quickly generated directly on the front end, without the need for any custom development.
- These tracking fields capture all actions taken on coding fields. The fields store user, date and time, and coding values. These details are available for both searching and filtering.
- From the review files screen, document-level audit field details are displayed in a pop-out menu, as seen below.

ENHANCED REDACTION FUNCTIONALITY

- We support multiple redaction sets and the ability to pre-define redaction characteristics.
- Pre-defining redaction settings at the onset of the project results in redaction consistency and eliminates the need for last-minute redaction updates prior to production.

SEARCH HITS REPORT (SHR)

- Our SHRs are an essential review feature that capture search hit information into automatically generated fields, which are available for searching, filtering and analysis.

ADDITIONAL REPORTING

- Complete reporting, including user, review rates, coding field and overturn reports.
- All reports are available for export to excel, word or PDF.

ENHANCED PRODUCTION FEATURES

- Viewer displays the produced version of the image, text and native.
- Automated custom slipsheet and OCR handling.
- Optional translucent and outline branding modes.

CUSTOMIZABLE SCREENS

- Easily customize screen content and layout to suit personal preferences, display only relevant panes needed. Screen pane location and size can also be customized.
- Personalized display settings are sticky and will be preserved for future login sessions.
