

# EXEGO® SELECT FEATURES

We built our business on making the process of turning terabytes of information into accurate results for our clients. And because your data was completely processed in Exego Extract you'll gain a better understanding of that data much earlier in the process.

Best of all, you will have access to many TAR tools that are not typically available in ECA (such as email threading, bulk tagging and robust reporting) to cull and calibrate your information well before the review process—at no additional cost.

- Early case assessment
- Email threading
- Concept searching
- Ability to search data retrieved from mobile devices
- Multi-language identification at the document level
- Advanced analytics
- Random sampling
- TAR (Technology Assisted Review)
- Bulk tagging
- Extensive reporting

## NO USER FEES

- Exego Select is included at no extra charge with your ESI processing.
- Support provided by an experienced Project Manager.

## COMPLETE SEARCHING

All data is completely processed. Our patent for in-line text extraction ensures accurate searching of embedded objects.

We handle hundreds of file types including:

- Foreign language data
- Lotus Notes® natively
- All Microsoft® suite of products
- Bloomberg® Mail
- AOL®
- And others

## EMAIL THREADING / ADVANCED ANALYTICS

- Exego Select includes powerful email threading with inclusive email and attachment analysis.
- Exego Analytics technology is available for conceptual searching
- Targeted searches as well as "hot document" analytic searches.

## EXCLUSIVE CELLEBRITE MOBILE DEVICE IMPORT MODULE

- Planet Data has developed native support for directly processing mobile data collections.
- All documents and metadata available in Exego Select.

## ASYNCHRONOUS SEARCHING

- Run multiple searches of any size simultaneously and continue to work.
- Increases user productivity.
- Automatically saves searches and results for later use.

## TECHNOLOGY ASSISTED REVIEW

- Random sampling as a standard process by using the Exego Select Validation Wizard and workflow.
- Initial review of data.
- Export/production of documents.
- Responsiveness testing.
- QA/QC remaining documents.

## POWERFUL REPORTING

- Search analysis reports provide detailed analysis of queries and what types of metadata searches are hitting on.
- Identify and eliminate false positives quickly and easily.
- Breakout search term hits by custodians.
- Provides a historical audit log of searches and search modifications for QA/QC and validation.

# Data Reduction = Significant Savings.

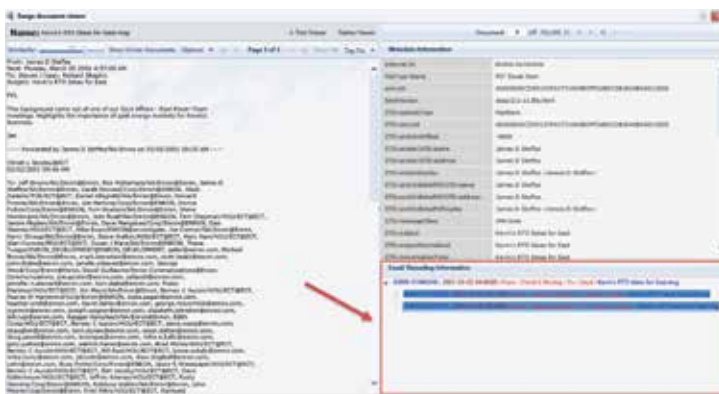

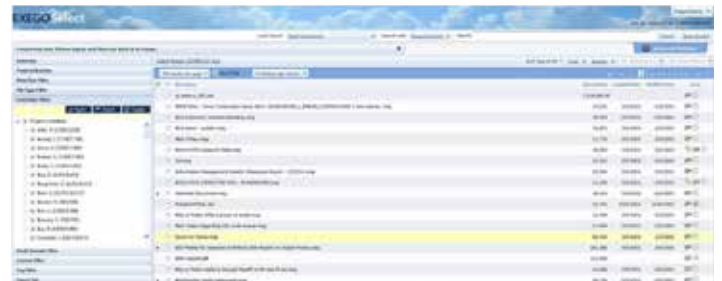

A recent study of five randomly selected Planet Data projects confirms that Exego Select significantly reduces data, as well as costs.

- Processing;
- Data hosting;
- Document Review; and
- Overall management fees!

PROJECT	PROCESSED GBS	BGS AFTER EXEGO SELECT	% OF DATA REDUCTION
1	6,000	700	89%
2	4,500	1,200	73%
3	1,070	20	98%
4	420	80	81%
5	279	7	97%
